

**CAD-CAM robotic fully integrated solution.**  
An innovative concept, flexible, compact, simple and efficient.

**Reliability and competence..**  
15 years of robotic integration experience and precision development in milling complex shapes for sculpture and orthopedic.  
Countless successful installations  
0 maintenance, no robotic-skills required

**Automation.**  
Trajectory calculation aimed for ease of use.  
Robotic solutions engineered for space optimization, to accommodate milling object shape size and hardness, associating very rapid milling robots. We offer the best solutions in terms of performance, price and knowledge with the support of leading robotic companies worldwide.

**Compatibility.**  
All CAD formats supported.

**CAM solutions customized.**  
100% plug &play: Place your object and let the software do the rest for you using the library of milling objects.

**High speed**  
Patented milling strategy

**Complete process management.**  
Our know-how on 6 axis robots let us support you for your complete process needs.

**Custom R&D.**  
The robots we propose offer a range of working radius from 40cm to 2m with rotative and linear external axis to suit your milling needs. Also development of robots in series to increase productivity.
